

Secure food waste destruction

additional details for recycling of packaging

- Secure destruction consignment arrives at our secure gated facility
- **only loads on booking system can enter site.**
- Consignment immediately unloaded into our building monitored by 24/7 CCTV.

Non-glass packaged food

- Pallets broken down manually to remove cardboard and outer plastic wrapping. Cardboard is baled and sent to recycler and outer plastic packaging is put in waste compactor which is incinerated at Veolia waste to energy plant.
- Food waste processed on paddle depacker line where packaging and food are separated. Liquids from food then stored in tanks and fed into digesters. Solid food is fed into digesters.
- Plastic and tins hot washed and baled.
- Bales of plastic, tins and cardboard moved to yard ready to be sent to recyclers.

Glass packaged food

- Pallets broken down manually to remove cardboard and outer plastic wrapping. Cardboard is baled and sent to recycler and outer plastic packaging is put in waste compactor which is incinerated at Veolia waste to energy plant.
- Glass piled into 'glass holding area' ready for processing.
- Glass processed on bespoke line where glass is broken, liquid removed and solid food separated through flotation process. Liquids from food then stored in tanks and fed into digesters.
- Glass cullet hot washed.
- Glass cullet moved to holding clamp ready to be sent to recyclers via bulker.
